

Underfloor Heating installation at The Woodlands, Brynna

Designed and Installed by Certus Construction 2023

Certus Construction have been appointed by H20 Building Services to design and install the Underfloor Heating for the latest release of 5 luxury properties at The Woodlands, Brynna. Ground Floor Underfloor Heating is a Tacker Pipe system for solid Screed, with 20mm low profile Floating Floor Underfloor Heating selected for the First Floor.

Certus designed the Underfloor Heating system with our manufacturing partner Giacomini, including R553 Stainless Steel mixer pump set manifolds and 16mm PE-RT five-layer pipe. Heatmiser Programmable Neo Thermostats provide individual room control, and the addition of a Neo Hub provides in-home and remote access, so homeowners can adjust individual rooms from tablet or mobile devices.

On the First Floors the Giacomini Underfloor Heating pipework was laid within 20mm Foil-faced routed XPS insulation panels. Certus also installed the Ground Floor insulation and screed and so provided the complete “Heated Floor Solution” for this prestigious site development.

Certus Project Value	£50,000
Main Build Contractor	Intelle Construction
Mechanical Contractor	H20 Building Services
Client	Wynndel Property Company
