

Underfloor Heating installation at Manor Court, Greet

Designed and Installed by Certus Construction 2024

Certus Construction have been appointed by Acorn Cardiff to design and install the Underfloor Heating for the exclusive collection of six 4- & 5-bedroom homes set in the charming Gloucestershire village of Greet. Ground Floor Underfloor Heating is a Tacker Pipe system for solid Screed, with Floating Floor Underfloor Heating and Screed-board selected for the First Floor.

Certus designed the Underfloor Heating system with Reliable stainless steel distribution manifolds and PE-RT Underfloor Heating pipework, to compliment the output of the Air Source Heat Pump. Heatmiser Programmable Neo Thermostats provide individual room control, and the addition of a Neo Hub provides in-home and remote access, so homeowners can adjust individual rooms from tablet or mobile devices.

On the First Floors the Reliable Underfloor Heating pipework was laid within Collecta Foil-faced routed XPS insulation panels, with 18mm Collecta interlocking screed-boards. Certus also installed the Ground Floor insulation and screed and so provided the complete "Heated Floor Solution" for this prestigious site development.

Project Value range

£75,000 – 100,000
